Professional Summary

Software Engineer with 2 years of professional experience in developing and maintaining web applications using Java, Spring Boot, Angular and RESTful APIs. Hands-on experience with databases, cloud technologies and software development. Previously worked as a Graduate Research Assistant at Rowan University focusing on Deep Learning and Generative AI. Strong foundation in object-oriented programming, data structures and algorithms, databases and problem-solving.

Technical Skills

Languages: Java, SQL, TypeScript, JavaScript, Python, Rust
Frontend & UI: React.js, Angular, Next.js, HTML5, CSS3, Bootstrap, Tailwind CSS
Backend Development: Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Node.js, RESTful APIs, Microservices, OAuth2/JWT
Databases: PostgreSQL, MongoDB, Elasticsearch, MySQL, DynamoDB
Cloud & DevOps: AWS (EC2, S3, Lambda, SageMaker), Docker, Docker Compose, Kubernetes, GitHub Actions
Data Engineering: Kafka, Spark Structured Streaming, ETL Pipelines, Pipeline Orchestration, Parquet, Data Validation
AI/ML Tools: PyTorch, Scikit-learn, Transformers, Diffusion Models, CLIP, LangChain
Testing & Developer Tools: Git, Maven, JUnit, Postman

Experience

Rowan University **Jan 2026 – May 2026**
Graduate Research Assistant – Deep Learning & Generative AI *Glassboro, NJ*

- Developed a multimodal Generative AI pipeline for RF channel estimation, integrating PointMAE, GINE, CLIP and diffusion models with 3D scene and radio-channel data.
- Built a graph-based data processing pipeline using GINE to generate 576-dimensional embeddings from object geometry, materials, spatial relationships and transmitter/receiver information.
- Developed and evaluated lightweight deep learning models, including a 457K-parameter CLIP model, 665K-parameter GINE model and 2.25M-parameter diffusion model for multimodal RF prediction.
- Evaluated inference performance on 8 NVIDIA A100 GPUs, achieving 3 ms latency with a DoT-based approach compared with 14 ms using SionnaRT.

Aagama IT Biz Solutions Pvt. Ltd. **Jan 2023 – Dec 2024**
Software Engineer *Hyderabad, India*

- Developed and maintained Java, Spring Boot and RESTful backend services for enterprise application workflows (200+ users, 1,000+ daily requests), implementing CRUD operations, business logic, input validation and centralized exception handling with Spring MVC and Spring Data JPA.
- Optimized SQL queries and JPA data access (indexing, fetch strategies, removing N+1 queries), reducing query execution time by about 35% on key reports.
- Integrated backend REST APIs with Angular applications and validated endpoints using Postman, unit testing and code reviews, while using Docker to standardize dev and test environments and cut setup effort by about 30%.
- Troubleshot production defects through debugging, log analysis and root-cause investigation, improving application stability, while delivering features in Agile teams using Git and Maven.

Projects

Resume Analyzer Web Application GitHub
Java, Spring Boot, React, PostgreSQL, REST APIs

- Developed a full-stack resume analysis application using React and Spring Boot REST APIs for resume uploads, job matching and skill analysis.
- Integrated PostgreSQL for resume storage and built a React dashboard displaying match scores, matched skills, missing skills and improvement suggestions.
- Implemented resume text extraction using Apache PDFBox achieving 95% extraction success across 100 test PDF files.

AetherFlow – AI Research Data Platform GitHub
Python, Kafka, PySpark, Spark Streaming, Docker, Parquet

- Built a Kafka and Spark streaming pipeline using Bronze–Silver–Gold architecture, processing 17,585 telemetry records across 233 simulated ML experiments.
- Developed PySpark ETL pipelines with Parquet storage, reducing dataset size by 69.92% compared with CSV.
- Built a Streamlit dashboard with four analytics tabs to monitor experiments, model performance, GPU utilization and detailed telemetry.

Parquet Compactor CLI GitHub
Rust, Polars, Clap, Criterion

- Built a Rust CLI tool to compact small Parquet files into optimized output files for efficient data processing.
- Implemented schema validation, configurable output sizes, error handling and dry-run execution.

Education

Rowan University **Jan 2025 – Dec 2026**
Master of Science in Data Science *Glassboro, NJ*

Certifications

SQL and Relational Databases – IBM
Convolutional Neural Networks – Coursera
